NOSHER KHALID

Senior iOS Engineer

Lahore, Pakistan | +92-322-322-2254 | nosherkhalid@gmail.com | linkedin.com/in/nosher-khalid | github.com/nosherkhalid

TECHNICAL SKILLS

Languages & Frameworks: Swift, SwiftUI, UIKit, Combine, Swift Concurrency (async/await, actors)

Architecture: MVVM-C (Coordinator pattern), Clean Architecture, Modular Architecture (Swift Package Manager), Protocol-Oriented DI, MVVM

Networking & APIs: REST APIs, async networking (interceptor chains, retry/backoff, multipart uploads), Twilio (Video/Voice), PortSip/PJSip (VoIP), Firebase

Data & Storage: Core Data, Realm, Firebase Firestore

UI & Accessibility: SnapKit, Auto Layout, Storyboards, Diffable Data Source, VoiceOver, Dynamic Type

Testing & Tooling: Swift Testing, XCTest, Instruments, Git/Git Flow, GitHub Actions (CI/CD), CocoaPods, SPM, Crashlytics

AI & Agentic Tools: Claude Code (+MCP servers), Cursor, ChatGPT, Figma MCP, CodeRabbit, Claude API

WORK EXPERIENCE

Sr. iOS Engineer — DeltaDots **Oct 2024 – Present**

Flic — digital business-card / social networking platform (NFC, chat, feed)

- Shipped new SwiftUI feature surfaces within Bundles (the app's digital-business-card product) and Broadcast (its social feed), establishing SwiftUI conventions now followed by the rest of the iOS team.
- Designing an in-progress SwiftUI/MVVM-C architecture for the Manage Profile flow — new ViewModel and an interim Coordinator that bridges to the app's existing legacy router — enabling incremental rollout without breaking dependent legacy screens.
- Built phone-contact import/matching and contributed feature work to the Network module, backed by typed domain-model mappers with Swift Testing unit coverage.
- Established Git Flow branching conventions for the iOS team and introduced agentic AI tooling into daily development — Claude Code (with project-specific architecture rules and MCP servers) for scaffolding, Cursor and ChatGPT for iteration, Figma MCP for design-to-SwiftUI implementation, and CodeRabbit for automated PR review.

Independent Projects & Upskilling **Feb 2024 – Sep 2024**

- Built a Threads-inspired social app (SwiftUI + Combine + Firebase) — post creation/editing/deletion, user profiles, and a live-updating feed via Firestore listeners.
- Deepened hands-on expertise in Swift Concurrency, modular architecture with Swift Package Manager, and test-driven development.

iOS Engineer — ILI Digital **Aug 2023 – Jan 2024**

KSC (Sports — German football club app)

- Investigated and resolved production bugs and UI issues in the KSC iOS app, a German football club's app, contributing to the app's stability across releases.

iOS Engineer — IKS Logics **Mar 2023 – Jul 2023**

SkillPlace (EdTech)

- Built SkillPlace's UIKit app architecture from the ground up, including the video-calling infrastructure, within **1.5 months**.
- Delivered real-time video calling using Twilio APIs, enabling live teacher-student sessions within subject-specific classrooms, under tight client deadlines.

Freelance iOS Developer — Upwork **Sep 2022 – Mar 2023**

DreamSpark (Social Networking)

- Resolved critical bugs, UI regressions, and performance issues for DreamSpark, stabilizing the production build for its App Store release.

Sr. iOS Engineer — King Revolution **Apr 2022 – Nov 2022**

SlickCall

- Integrated the PortSip VoIP library into SlickCall's eSIM product, enabling in-app audio calling over SIP — working with low-level telephony infrastructure including PJSip bindings.
- Maintained release quality through extensive QA cycles and direct client testing across multiple project deliverables.

iOS Engineer — Tiksom Pvt Ltd **Jul 2021 – Feb 2022**

TapForJoy (Fitness) · Earkick (Mental Health) · Holiday Swap (Travel)

- Developed in-app purchase flows for TapForJoy using StoreKit, implementing multiple subscription tiers and handling receipt-validation edge cases across **2.5 months** of focused delivery.
- Delivered mood tracking, anxiety logging, habit tracking, and breathing-exercise features for Earkick within a **1.5-month** engagement.
- Streamlined user authentication and onboarding flows for Holiday Swap, a travel platform with a global user base.

iOS Engineer (Contract) — Emblem Technologies · Piecyfer · ArhamSoft **Feb 2020 – May 2021**

OnlineDoc · SafeStart · Love at First Swipe

- Developed key screens and core features for OnlineDoc, a global doctor-connectivity platform, and SafeStart, a patient pre-screening app, focusing on UI fidelity and bug resolution.
- Contributed UI updates and bug fixes for Love at First Swipe, a dating app connecting singles worldwide.
- Used Crashlytics and Instruments to monitor performance and address stability issues across multiple production apps.

iOS Intern — AlphaSquared **Aug 2019 – Feb 2020**

- Built a full Quran application from scratch — rendering the complete Quran text via JSON parsing, with Qibla direction, prayer timings, and local notification alerts.
- Developed an attendance logger using Estimote Bluetooth beacons and Firebase, enabling proximity-based clock-in/out at office premises.

NOTABLE PERSONAL PROJECTS

- **Modular Image-Loading Pipeline** (SPM + TDD) — 6-package architecture (CoreKit, NetworkKit, CacheKit, ImageServiceKit, ImageListFeature, ImageDetailFeature) with protocol-based boundaries, a memory/disk caching strategy, and full TDD coverage per package.
- **Movie Search App** (UIKit + Combine) — MVVM Input/Output pattern with reactive state management, debounced search, and cursor-based pagination.

EDUCATION

M.S., Electrical Engineering — University of Central Punjab, 2016
B.S., Electrical Engineering — FAST-NUCES, 2014
